FOREWORD

The data in the present Abstract of Empire Trade have been compiled for the use of the Imperial Economic Conference, 1932. According to the latest complete statistics available, viz.: 1930, the British Empire transacts from 28 to 29 per cent of the total trade of the world, the proportion for import trade amounting to about 30 per cent, and of export trade to about 26 per cent.

Table I presents a conspectus of world trade, both import and export, and the position the British Empire occupies in that trade. In the year 1930 the United Kingdom occupied first place in total world trade, being first in imports and third in exports; the United States second place, being second in imports and first in exports; Germany third place, being third in imports and second in exports; France fourth, in both imports and exports; and Canada fifth place, being fifth in imports and sixth in exports, British India occupying fifth place. The data in the following table illustrate this point.
